

Uday Ganpati Pawar

AI/ML Engineer | Generative AI | Agentic AI | Data Scientist

✉ pawaruday2616@gmail.com ☎ 9359080465 📍 Pune, Maharashtra, India

🌐 linkedin.com/in/uday-pawar-38737b2b6 🐙 github.com/udaypawar23

PROFILE

AI/ML Engineer Fresher with hands-on experience in Machine Learning, Deep Learning, Computer Vision, and Data Analytics. Skilled in Python, SQL, TensorFlow, Scikit-learn, Git, and GitHub. Familiar with Generative AI, Large Language Models (LLMs), LangChain, LangGraph, FastAPI, REST APIs, and Agentic AI concepts. Passionate about building intelligent AI applications and learning cloud-based AI solutions in enterprise environments.

SKILLS

- **Programming Languages:** Python, SQL
- **Machine Learning:** Regression, Classification, Random Forest, Logistic Regression, Cross Validation, Hyperparameter Tuning
- **Generative AI:** LLMs, LangChain, LangGraph, CrewAI, Prompt Engineering, RAG, Agentic AI
- **Deep Learning:** CNN, TensorFlow, Keras, Computer Vision
- **Backend:** FastAPI, REST APIs
- **Cloud & DevOps:** AWS Fundamentals, Docker Basics, CI/CD Concepts
- **Visualization & BI:** Power BI, Excel, Matplotlib, Seaborn
- **Tools:** Git, GitHub, Streamlit, Jupyter Notebook, Google Colab

SOFT SKILLS

- Effective Communication & Presentation
- Self-Motivated with Continuous Learning Mindset
- Strong Analytical & Problem-Solving Skills
- Team Collaboration and Leadership Ability

PROFESSIONAL EXPERIENCE

Rubix - AI Solutions

05/2025 – 01/2026 | Bengaluru

Data Science & AI/ML Intern

- Explored Generative AI and LLM concepts.
- Familiar with LangChain, LangGraph, and Agentic AI workflows.
- Worked with Git/GitHub for version control.
- Gained exposure to REST APIs and FastAPI basics.
- Researched AI automation and enterprise AI applications.

PROJECTS

AI Chatbot using LLM Concepts

Technologies: Python, LangChain, Streamlit

- Developed an intelligent chatbot using Large Language Model (LLM) concepts.
- Explored LangChain for conversational AI workflows.
- Applied prompt engineering techniques to improve response quality.
- Built a user-friendly interface using Streamlit.
- Studied Agentic AI and AI assistant architectures.

Client Project: Transaction Risk / Default Prediction

Technologies: Python, Pandas, NumPy, Scikit-learn, Logistic Regression, Random Forest

- Developed a machine learning solution to predict transaction/ default risk using structured financial data.
- Performed data preprocessing, missing value treatment, and exploratory data analysis (EDA) using Python, Pandas, NumPy.
- Applied feature engineering techniques to improve model performance and data quality.
- Built and evaluated classification models using Scikit-learn (Logistic Regression, Random Forest).
- Used performance metrics such as Accuracy, Precision, Recall, and F1-Score for model evaluation.
- Delivered insights to support business decision-making and risk mitigation strategies.
- Improved model performance using feature engineering and imbalanced data handling techniques (SMOTE/ class weighting)
- Achieved ~88% accuracy with optimized model performance.

GitHub: <https://github.com/udaypawar23/transaction-prediction> 

AI-Based Rice Leaf Disease Detection

Technologies: Python, TensorFlow, Keras, CNN, OpenCV, Streamlit

- Designed an AI-based computer vision system to classify rice leaf diseases from image data.
- Applied image preprocessing techniques including resizing and normalization.
- Built and trained a CNN-based deep learning model for disease classification.
- Developed a Streamlit interface to allow users to upload images and receive predictions.
- Achieved ~91% test accuracy with optimized CNN model.

GitHub: <https://github.com/udaypawar23/Rice-Leaf-Disease-Detection> 

Earthquake Damage Prediction System

Technologies: Python, LightGBM, Pandas, NumPy, Scikit-learn

- Built ML model to predict building damage levels using structured data.
- Performed EDA, feature engineering, and preprocessing.
- Applied models like Logistic Regression, Random Forest, and LightGBM.
- Improved model performance by ~5–8% using feature engineering techniques
- Achieved ~73% accuracy and 0.70 F1-score using optimized LightGBM model.

GitHub: <https://github.com/udaypawar23/earthquake-damage-app> 

Home Loan Approval Prediction System

Technologies: Python, Pandas, Scikit-learn, Logistic Regression

- Developed a machine learning model to predict loan approval using applicant data.
- Performed data preprocessing, missing value handling, and feature encoding.
- Applied classification algorithms like Logistic Regression and Random Forest.
- Evaluated model using Accuracy, Precision, Recall, and F1-score.
- Improved model performance using data preprocessing and feature encoding
- Achieved ~82% accuracy with optimized performance

EDUCATION

B.Tech - Computer Science & Engineering

2021 – 2025 | Sangli

Nanasaheb Mahadik College of Engineering

- CGPA 7.0 / 10

HSC

2020 – 2021 | Karad

Sadguru Ghadge Maharaj College of Science

- Percentage - 66.83%

CERTIFICATES

- Certified Data Scientist (AI & Machine Learning) – DataMites (2025)
- Data Science Foundation – IABAC (2026)
- Python Programming – Pentagon Space (2024)
